ManyCam ProÂ .Legal Information General Terms and Conditions of Performers and Artists The BMG Rights Management Group GmbH ("BMG", Legal successor to GEMA), Berlin-based company is the exclusive German performer rights management company for public performances of musical works by German and international recording artists. The BMG Rights Management Group GmbH is the collective rights management company of EMI Musikverlagsgesellschaft mbH, a

German corporation headquartered in Frankfurt. For the performance of musical works, the performer is granted a specific licensing agreement that grants the right to perform, for example at concerts, at theaters or in bars, a pre-specified number of times or for a specified period of time. In a specific text, each performer is informed about the terms and conditions for granting this performance license.The present invention relates to an information reader and more particularly to a recorder-reproducer of digitally encoded information. A recorder-reproducer is a device which is relatively inexpensive in construction, and relatively convenient to use, while enabling a user of the device to

record, reproduce and further process recorded information in an aural and/or visual format. Most conventional recorder-reproducer devices operate by decoding a digitally encoded signal, recording the signal, then playing back the recorded signal to reproduce the information recorded on the signal. Some recorder-reproducer devices include the ability to playback a recorded signal in combination with the ability to edit the recorded signal. Such recorder-reproducer devices are referred to as recorders and recorders. Problems exist with respect to conventional recorder and recorder-reproducer devices in that they only record and playback digitally encoded signals. For example, in addition to

recording analog signals, such conventional recorder and recorder-reproducer devices are unable to add, delete or otherwise modify analog signals. Recently, the digital video industry has standardized the transmission of analog signals in the form of composite video signals. The common video standard of MPEG-2 is capable of transmitting an information stream or signal in a digital format which preserves much of the information intended to be transmitted from the analog format to the digital format.
