The menu bar at the top of the screen (see Figure 6-6) contains many of the most useful menus for image creation and manipulation. If you press and hold the Shift key, you get the menu bar that applies to all of Photoshop's modes. **Figure 6-6:** If you press Shift, you get the standard Photoshop (menu) bar. Many versions of Photoshop may display different prompts depending on your version or on which plug-ins are installed. For example, all recent versions of Photoshop have the exact same file-handling features, but there may be some differences for older versions. Quick Settings (Dummies) Photoshop includes the most common features to help you create images by selecting common file types or working with common file formats. Selecting a file type To start your image processing, you may find it easiest to start with a particular file type in mind — such as a JPEG, TIFF, or EPS. When you start a project, be sure to select a file format of the proper type to preserve as much information as possible. This keeps the image intact if it later needs to be manipulated, so adjust your workflow accordingly. If you are working from a project folder or an existing file, you can open it directly in Photoshop. If you want to work from an external media file, the first step is to open the image in Photoshop. You may then choose File⇒Open. To specify the file type of a document you've already opened in Photoshop, choose Image⇒Type. The Type dialog box opens, as shown in Figure 6-7, in which you can select from a list of existing file types (see Figure 6-8). To specify the file type of a document, a folder, a disk, or an existing document in Photoshop, click the first option and then choose the type of file that appears in the Open dialog box. **Figure 6-7:** Choose the file type from this dialog box to specify the original file type when you create a new file. **Figure 6-8:** Choose the file type of an existing file or placeholder. To specify the type of a new image, type a name for the new file, enter some optional keywords, and click OK. Photoshop displays a warning message that the new image file type may not be compatible with some components used in the image. If you notice a warning message

Information on date of application, application form, acceptance and financial aid is available at the Office of Student Financial Services. The application must be submitted by December 1st in order to have sufficient time to determine financial need and submit the application. All colleges and universities in the United States use the Common Application to submit the application online. In some cases students are required to write the Common App essay. The Common Application enables applicants to search for universities by name or by subject area. In addition, because all colleges and universities have agreed to use the Common Application, the application represents one of the most important steps in the college application process. The Common Application is designed for prospective students who want a single application and a central place to submit it. As of the last report, over 5,100 schools and other institutions use the Common Application. This number is growing. In addition, the Common Application provides an electronic transcript with the College Board, and makes communicating information about student progress easier. Finally, the Common Application provides an online forum for discussion among applicants. The Common Application is free and requires no credit card. It is the number one choice for students and universities. Source of information: Common App itself Terms of use: The Common App is a free service of the College Board, a non-profit membership association based in San Antonio, TX. The term "Common App" refers to the Common Application and any other APP you create and use with a College Board school. 1. Field of the Invention This invention relates to a method of manufacturing a semiconductor device, and more particularly to a method of manufacturing a semiconductor device, by which a fine processing step has an improved yield and reliability of a device by improving a step of filling a contact hole or a trench formed between a source/drain region and a gate electrode with a conductive film, preventing a "string" or an "encapsulating defect" caused by the contact hole or the trench. 2. Background Art In recent years, with progress of the fineness and the high integration of a semiconductor device such as a semiconductor integrated circuit (IC), a contact hole or a trench (recess) formed between a gate electrode and a source/drain region is becoming fine and deep. Especially, it is becoming more difficult to fill the fine and deep contact hole or trench with conductive material. A method, which fills the fine and deep contact hole or trench with conductive material by a chemical vapor deposition (CVD) method has been applied. However, the conductive material filled in a contact hole or a trench formed between a gate electrode and a source/drain region by a CVD method has, at a bottom of the fine and deep contact hole or trench, a void formed by a flow of excessive material in an opening part. The void at the bottom of the contact hole or trench might, when a wiring layer formed on the conductive material is etched to form an electrode or an interconnection, cause disconnection of the wiring layer. Further, the void at the bottom of the contact hole or trench might cause leakage of electric current or cause a short-circuit defect. When the trench is filled with conductive material, a void can be avoided by introducing CVD gas, etc. into the trench by using a vertical directional CVD method. However, in the vertical directional CVD method, the opening part of the fine and deep trench becomes narrow, and therefore, in the opening part, it becomes difficult to fill the fine and deep trench with conductive material, resulting in a void. To avoid such a problem, a method has been disclosed in, for example, Japanese Patent Laid-Open No. Hei 10-59383, that allows a fine and deep hole to be filled with conductive material by a metal CVD method even if the fine and deep hole has a narrow opening part, in a process for forming a metal wiring layer by
