AutoLISP AutoLISP is a scripting language embedded within the AutoCAD Application Programming Interface (API) or Application Programming Interface (API). It is a combination of Visual Basic, BASIC and some statements that are common to other AutoCAD scripting. AutoLISP enables users to perform custom tasks within AutoCAD, and their work products can be saved to DXF, DWG or DWF files. AutoLISP can be used to automate custom work tasks and also to modify objects in a drawing. For information on AutoLISP, refer to the following resources: Home page for the AutoLISP scripting language. Tutorial for the AutoLISP scripting language. Common LISP Programming documentation. Visual LISP Visual LISP is a scripting language for Autodesk's AutoCAD. Similar to AutoLISP, it is a combination of Visual Basic, BASIC and some AutoCAD statements. Visual LISP is used for modifying objects, performing custom tasks and controlling the drawing process. It also enables users to perform custom operations in a drawing such as performing a group-by of objects, drawing multiple copies or combining objects. For information on Visual LISP, refer to the following resources: Home page for Visual LISP. AutoCAD Support Website for Visual LISP. Visual LISP Tutorial. AutoCAD Scripting Extension (AutoLISP) for Visual Studio AutoLISP for Visual Studio is a plug-in for Visual Studio IDE and Visual LISP is embedded into it to support the scripting language. In order to enable Visual Studio to be used for custom development, a number of scripting extensions are available to extend its capabilities. Visual LISP is the most common one which can be used to automate custom work tasks and modify objects in a drawing. Category:AutocadFord has signed a deal to sell the Blue Oval's new F-150 offroad truck to India for \$50,000. "The Indian government has unveiled the long-awaited policy to promote the sale and usage of indigenous auto components," said Seemant Ahuja, vice president and general manager of Ford India. "Ford will support the manufacturing of components for the F-150 in India, as this will enable the F-150 to be sold at the price that is appropriate for the Indian market." The sale of the pickup to the Indian market will help boost F-150 sales in India, where it is currently sold by two Tata-owned companies, Tata Motors and Mahindra & Mahindra. Ford will use its joint venture with Tata, Tata Motors Ltd., to manufacture the F-150's transmission and powertrain components in Chennai, India. Ford and Mahindra, owner of Mahindra & Mahindra, plan to produce F-150 cab and chassis in Chennai. The Blue Oval has had trouble gaining ground in India, where it competes with the likes of Tata's Ram truck and Mahindra's Scorpio. The company sold 2,133 F-Series trucks in India last year, a 2.5 percent increase from 2012. Sales also are picking up in the first half of 2013

What's New In?

Express Export: Create or modify your documents at your fingertips. Export documents and drawings to your preferred format with a few clicks of your mouse. The first available free major release of the new Express Export features are available for 2018 and 2019, use the free update to automatically take advantage of the latest version. Rasterize: Rasterizing is a big part of the transition from 2D to 3D. Rasterizing makes drawings look like 3D and sets up the base for further 3D design and modeling. Rasterize on the fly: Rasterize directly from the 3D model browser. Just double-click and enjoy a 3D preview. Interactive Solid Models: You can now use the 3D model browser to turn a 2D drawing into a realistic 3D model. The most important thing about the 3D model browser is that you can create and edit models interactively. You can see the changes immediately on your screen as you manipulate the model. 3D Coordinate Frames and Position Sliders: Create and edit coordinate frames with interactive position sliders to precisely position your designs. 3D Measurement Types: Quickly measure, size, and position your designs in 3D with multiple measurement types and categories. 3D Project Browser You can now use the 3D model browser to turn a 2D drawing into a realistic 3D model.
