Remote Assistant Crack + With Full Keygen Free Download

Remote Assistant is a useful application that can help you easily connect to another PC over the Internet. The program is dedicated to users who offer technical assistance and facilitates a quick solution by allowing them to connect to their customers' stations and identifying the problem. Remote Assistant can run continuously on your computer, in the background, keeping your station available for receiving assistance requests. The program works with Remote Host, which the customer must install on their computer and create a formal help request to your system. You simply need to provide them with your username and the IP address displayed Remote Assistant's interface. Once the connection is established, you can remotely connect to another user's desktop, chat with them, transfer files or redirect the link.

Remote Assistant can display the date and time of each session and calculate the received and sent packages. This parameter indicates the strength of the Internet-based connection. Manage connection settings Remote Assistant allows you to view a history of all the sessions in a separate tab, along with the IP address of the client, plus the date/time of establishing and interrupting the connection. The program can calculate the total size of the data you sent and received to/from the computer you connected to. These are details you can include on the bill or enter in the official record.

Remote Assistant enables you to set certain details regarding the quality of the desktop connection view, such as image resolution, the number of colors and the scanning rate, based on the CPU usage. Security and IP filtering Remote Assistant allows you to use an external service for determining the IP addresses, that you need to specify, as well as choose custom or alternative ports. The IP filtering function implies a whitelist and a blacklist, to which you can add IP addresses or IP masks. You can also specify the specific addresses for redirecting connections. Developed in: Poland

Votes: 8 TeamViewer 14.0.4 - Remote Access, Remote Support, Remote Control TeamViewer is a video-over-IP solution, based on VoIP. It was developed to provide an excellent remote control and remote support solution, intended for office teams. Its users can access to the workstations of the network from a remote location, remotely support users, or even manage their computers from remote locations. TeamViewer's functionality is virtually unlimited, thanks to its advanced feature set, which includes: support for desktop sharing, telephony, management, and many more. With

TeamViewer, users can
