Motorola's glorious history of ditching broken products would come to an end next month, if a new report from Business Insider is to be believed. If it comes to fruition, the new phone would continue to follow the consumer-first philosophy of its predecessor, the RAZR M. But for one attribute, it seems that the new handset would be significantly lacking. To put it simply, it would be too long to the point of being uncomfortable. Motorola has been maintaining a slightly different design philosophy since it spun off from Google in the first place. It might not have stuck to the "slim" shape of every other phone on the market, but it has remained a trendsetter thanks to functionalities like Moto Display and Moto Actions. One such feature that helped push the RAZR line to such success was its extreme length. Despite being so narrow in the rest of its features, the phone's biggest perk was its length. Motorola RAZR is almost 6 inches long The company's first RAZR, launched in 2011, was the industry's slimmest smartphone. It was a total departure from the previous RAZR series that used to feature thick, slab-like shapes and extra-long battery capacity, all of which make up for that small, light, pocket-friendly hardware. It was a big hit, and the reason why many people loved the phone was that it was one of the only smartphones with a perfectly proportioned design. The company's second generation of the RAZR phone followed the same design philosophy, and continued to expand the phone's length. The first and third-generation RAZR were mostly average, however, the second RAZR was a significantly better experience. The RAZR M was the industry's first successful phone that was significantly shorter than its predecessor. At 4.7 inches, it was one of the first consumer phones that was long enough for people to actually use 0cc13bf012
