You can scan your old photos, or even photos that you acquire from other sources, such as websites or mailboxes. Creating a digital version of your photos keeps them safe and preserves memories. After you have your photos in a digital format, you can edit them as needed and archive them for a later date.

These tools are not as powerful as the professional version, but they support basic editing functions. Some of the features in Photoshop Elements are similar to those in Apple's Quartz Graphics Context. A filter stack is supported. Three filter types are included: Filters that modify color, brightness, contrast, and various other parameters. , brightness, contrast, and various other parameters. A new computer is needed for the first upgrade, but once that is done, the program can be upgraded without much interruption. The first version of Photoshop Elements (7.0) was made available as both a CD-ROM and a download. It was packaged in two versions, one for the Macintosh and one for the Windows operating system. A new computer was required for any upgrades beyond the first. The CD-ROM version was compatible with older Macs, as well as Windows PCs that were not equipped with a DVD drive. Photoshop Elements in recent years has been available as both a CD-ROM and as a download. This made it much easier to upgrade, and no new computer is necessary to upgrade to the latest version. Earth's photovoltaic system could provide enough electricity to power 13 billion human beings across the world within 20 years, according to a new study from the Global Change Research Program at NASA's Earth Science Division. The study, which is being presented at the European Geosciences Union General Assembly in Vienna, Austria, looks at the effects of rising atmospheric concentrations of carbon dioxide on the amount of solar energy available to Earth. The team combines these findings with new research on the sun, such as the latest version of NASA's most comprehensive catalogue of sunspot groups and cycle 24 as well as a scientific model to predict the future for the Sun. "The energy source from the Sun is finite, and when a planet absorbs CO₂ from the atmosphere, it reduces the amount of solar energy that hits the planet," said Jay Zwally, the lead author of the study and senior research scientist at the Center for Earth System Research at Stanford University in Stanford, Calif. "If all of the extra CO₂ we pump into the atmosphere remains, and an increasing proportion of it does, global temperatures could rise by 6 degrees Celsius -- too hot for human civilization." The results of the study show that if atmospheric concentrations of CO₂ doubled to 700 parts per million (ppm), the amount of solar energy hitting Earth's surface would decrease by 0.15 watts per square meter -- equivalent to a global energy deficit of 14.6 billion watts. Atmospheric concentrations of CO₂ will almost certainly double by the year 2100 in the absence of significant measures to reduce emissions, and levels of CO₂ will continue to climb during subsequent decades even if those measures are implemented. "The simple and straight-forward conclusion from this work is that the Sun will provide fewer solar energy units to the Earth, and we will use up those units more quickly. But the question of how much more quickly is the only answer if we want to be able to plan our energy future for the people in this world," Zwally said. Future generations will have to make some difficult decisions about the future of Earth. advertisement "We are only now learning about the effect of even small changes in the Sun's brightness and the impact that it will have on the Earth's climate," said Oli Wood, the study's other lead author, who is an engineer at the Carnegie Institution for Science in Washington, D.C. "We hope this work will spur greater efforts to reduce emissions so that our grandchildren will be able to enjoy the

Q: MySQL AND/OR query to populate table I am attempting to have a query that populates a table. My main issue is how to have the query only check two fields, not three. So for example I want SELECT date_format(event.date_taken, "%Y-%m-%d") AS date_taken FROM event WHERE state_id = 'ED' AND either cdc.dna_id = 'JSA' OR cdc.dna_id = 'NHC' OR case cdc.dna_id when 'CDC' then cdc.structure_id = '28.7' end I would like to only run my query against the state_id = 'ED' if there is at least one of the following: CDC JSA NHC How would I accomplish this? A: I think you will need to use a union query: SELECT DATE_FORMAT(event.date_taken, "%Y-%m-%d") AS date_taken FROM event WHERE state_id = 'ED' AND (CDC.dna_id = 'JSA' or NHC.dna_id = 'JSA' or CDC.dna_id = 'NHC' or cdc.structure_id = '28.7') UNION SELECT DATE_FORMAT(event.date_taken, "%Y-%m-%d") AS date_taken FROM event WHERE state_id = 'ED' AND cdc.dna_id = 'JSA' or cdc.dna_id = 'NHC' Review: 'The Hobbit' The hobbit hearkens back to a simpler time. It's the early 1960s, and a 13-year-old boy is indulging in fantasy about Peter Rabbit, when his father, a Wall Street wh
