The Gradient tool allows you to create various effects using color and transparency gradients. The Pen tool gives you the ability to modify objects and edit paths (or vectors). The Eraser tool removes areas of an image that are selected and filled. The Spot Healing Brush is used for partial image repair.

**Brushes** Many Photoshop brushes can be found through the Brush Library. These brushes are organized by effects, textures, actions, frames and patterns. All brushes also include a Spacing setting so you can adjust how far apart brush strokes appear. There are a few different types of brushes in Photoshop. These brushes can be moved and zoomed as a whole, as an individual stroke, or even as a group. This makes brushes very versatile. The Graphic Pen is a brush that allows you to paint within an image. The Pixel Brush is a brush that paints many pixels at once. Each brush stroke only paints a single pixel so you have to make sure the pixels are close enough together or the paint will look patchy. The Eraser Brush allows

you to erase, blend, or soften existing pixels on your image. The Clone Brush is similar to the Clone Stamp, only instead of simply copying pixels, it will clone the brush stroke to a new area. The Gradient Stops tool allows you to create color gradients using opacity and color variations. The Flow tool is used to quickly paint a rectangular selection in an image. The eyedropper is used to select areas of an image. The Gradient from the selected area is copied to the Brush tool. Brushes give you the ability to modify and edit objects and paths. Changing the size of a brush makes it bigger or smaller. When you zoom in, the stroke gets even longer, and when you zoom out it gets smaller. The Stroke Width setting controls the size of the brush stroke.

**Tools**

The Pen tool in Photoshop allows you to modify objects and paths (or vectors) in an image. The Pen tool works better in a graphics tablet than a mouse, as using a mouse is more natural to us but that can be a challenge when you're using Pen tools. The Pen tool can be used to make basic paths or it can be used to make complex drawings or designs. There are a few different Pen tools:

Evaluation of the pharmacokinetics of nebulised salbutamol in asthmatic children. In this study, the pharmacokinetics of inhaled salbutamol, 0.5%, was evaluated in seven children with bronchial asthma, aged 7.4 +/- 0.6 years. Salbutamol peak plasma concentrations (C<sub>max</sub>) were achieved between 0.6 and 6.5 min after drug inhalation and the dose-normalized peak plasma concentrations (C<sub>max</sub>/dose) were between 4.2 and 20.2 ng.ml<sup>-1</sup>.min<sup>-1</sup>. Administration of a nebulizer solution to the mouth and throat of the paediatric patient delayed the onset and increased the peak salbutamol plasma concentrations (C<sub>max</sub>), with a statistically significant difference (P < 0.05). Q: How do I clear text in C# window? I have a C# application, which reads a TXT file. After some actions from the application, I need to clear the text in the window before I start again. I tried: `TextBox1.Clear();` but it doesn't work. How do I do that? A: Set the `MultiLine` property to false: `TextBox1.MultiLine = false;` A: What's the point of the textbox?

---

You don't need it unless you want to add some information to the file. Try something like this. `TextBox1.Text = ""`; A: I used this at one point to delete everything in the TextBox: `TextBox1.Text = String.Empty`; This is just a quick and dirty way, but it should work.
