

I can't seem to get past this line "Error! module Midas4ATRIS not found; Wrong Web Driver, Wrong version of MODBUS RTU, Wrong Modbus version/driver of target device" A: Apparently, this problem with the old version of the 11.14.12.0010 ModbusUcWeb driver, which has been replaced with a newer version in the latest release of the software. In order to fix this, you have to download the latest release of the driver from here: After downloading the.zip file and extracting it, copy the MODBUS_UCWEB.dll from the zip folder and paste it in the \data\midas4ati\share\drivers folder. Then use the old driver. Version 11.12.26.0003 ModbusUcWeb.dll

1. Field of the Invention The present invention relates to a semiconductor device and a method of manufacturing the same, particularly to a semiconductor device having a split gate and a method of manufacturing the same.

2. Description of the Related Art Recently, an N-channel MOS transistor has been used for an SRAM memory cell as a semiconductor device having a CMOS structure. In order to realize a cell having small area, an SRAM cell has been developed in which the N-channel MOS transistor and the P-channel MOS transistor are disposed in a direction vertical to a semiconductor substrate. For example, Japanese Unexamined Patent Application Publication No. 5-45034 discloses a semiconductor memory device using a trench formed in a substrate. In this semiconductor memory device, a P-well region formed by deep-drawing a P-type semiconductor substrate is used as a cell region. On the P-well region, a well region (N-well region) is formed to form a source and a drain of the N-channel MOS transistor. Similarly, the P-well region is used as a region for forming a cell region for the P-channel MOS transistor. In this case, in order to suppress the threshold voltage of the P-channel MOS transistor, a P-type impurity is added into the P-well region to form a low concentration region. However, in the semiconductor memory device disclosed in Japanese Unexamined Patent Application
