The AutoCAD software program, one of the most popular software packages in the world, is used by professionals in the fields of architecture, engineering, and construction for creating technical drawings that depict the design of buildings, machinery, and other artifacts. AutoCAD is primarily used by architects, engineers, construction professionals, and students to create technical drawings. It can be used to create architectural drawings, electrical, mechanical, and other engineering drawings, and even floor plans, 3D models, and other products. It is the second most popular desktop CAD application in the world, as it is the most widely used desktop CAD application in the world. (sources: Wikipedia, Statista) Since its first release, AutoCAD has also been used as a design tool for automatic drafting and robotic manufacturing.
