A Device Driver is a piece of software that enables an operating system to interact with a device such as a network adapter. For example, the firmware in the product is used to communicate with the network adapter. However, the driver is the software that actually connects a device to the network and communicates with other devices. While the firmware is the core of the product, drivers are the software pieces that allow you to connect your device to the network. Insert the CD/DVD that contains the driver Software. Shut down or remove all other accessories and accessories. If you are using a Computer, connect the ethernet cable between the Product and your Router, or wait for the Network cable to connect. Reset the product, and remove the CD/DVD from the drive. If you are using a Mobile Phone or Device, connect it to the power source. Belkin International (New Zealand) Ltd warrants that any media (such as a CD or USB stick) on which the Software is provided will be free from defects in materials and workmanship under normal use for 90 days from the date of its original purchase (the Warranty Period).
