We have had some good news and bad news for Denuvo encryption in the past year. The good news is that the Australian Government has made it mandatory for games to use Denuvo DRM. This will make it harder for the community to crack Denuvo's encryption, although there are many ways around this and the community still cracks Denuvo cracked games. The bad news is that since the encryption has been cracked we have received emails from people suggesting we cease our current cracking program. We don't think they will succeed in convincing us to stop but it is obvious the community will still crack games in a different way. 3DM has announced that they have now cracked Denuvo for games like Dragon Age: Inquisition, Injustice 2, Fallout 4, Fallout 3, Assassin's Creed Origins and many more games that use the Denuvo software protection. The group has released the Denuvo crack and it is working. They have claimed that it is possible to achieve similar results for other games that use the same or similar software, such as The Witcher 3, and will release an update to show you how this works. Since this is the first time 3DM has cracked a Denuvo protected game, it is not immediately clear if their claims will be true. However, the fact they have cracked so many games recently does suggest they can crack games successfully. In December 2014, the Chinese warez group 3DM claimed to have defeated Denuvo and later that month released a software crack for the video game Dragon Age: Inquisition, which uses the Denuvo anti-tamper technology to protect Electronic Arts' Origin Online Access DRM. [6] The group claimed that the technology involves a 64-bit encryption machine that requires cryptographic keys unique to the specific hardware of each installed system. [7] However, the 3DM crack arrived almost a month after the game's release in November 2014, an unusually long time for PC games [6] which were normally cracked on the same day as release. Asked about the development, Denuvo acknowledged that every protected game eventually gets cracked [6] and Ars Technica noted that most sales for major games happened within 30 days of release, and so publishers may consider Denuvo a success if it meant a game took significantly longer to be cracked. [8] 3DM continued to release cracks for Denuvo-protected games throughout 2015.

however, the 3dm group has managed to crack eight denuvo games in less than a year. the group has a simple and cheap technique to crack denuvo (it costs them nothing more than a couple of hours of work). the group just disassembles the denuvo executable and then modifies it to bypass the denuvo protection. when this denuvo cracking technique was released, people were immediately concerned about the longevity of denuvo. however, a while ago baldman stated that the cracking technique developed by him and his team is as strong as denuvo v3 and v4 protection. according to him, the technique is not only resistant to all current cracking methods but it can also be used to crack games that use denuvo v3 and v4 protection. all that is left for the 3dm group to do is to monitor the pc game sales during the coming year and see if denuvo has been as effective as they hope it will be. however, it is evident that denuvo has not worked at all and it is now clear that the anti-tamper technology is far from perfect. baldman has also stated that there will be a denuvo 5 in the coming years and the group is working on a cracking technique that can be used to crack denuvo v5 protection. in his words, he stated that the denuvo cracking technique could be used to crack a wide variety of anti-tamper technologies. the cracking technique is made up of three pieces and baldman told the world that they have already

spent more than 100,000 hours of their time in order to create the denuvo cracking technique. it is almost certain that during the coming year, the anti-tamper technology will be cracked and will fall into the hands of the 3dm group. denuvo is one of the major problems in the pc gaming market and it is quite likely that the cracked version will be the first anti-tamper tech that is cracked. 5ec8ef588b
