DbOctopus

An easy way to automate database table & field editing and SQL statement creation. This is a software program that enables you to connect to remote databases through an SQL server and edit tables or data fields. The software enables you to connect to multiple stations and view the available databases in a tree structure. Database editor Not only can DbOctopus help you access remote databases, but you may also explore and modify relational data from the SQL tables. You can easily access database work sheets, tables, modify columns, stored procedures, as well as edit data fields. New data can easily be added, and you can find/replace pieces of text within tables. Additionally, the software enables you to open a table and view it in page mode or create a pivot table based on the original structure. You may also copy and paste several rows between tables or export data to external sources. Moreover, the software supports data import from other documents. Query assistant DbOctopus allows you to conduct complex queries, by easily browsing through all the available tables, pages, database documents or even different server connections. You may enter several key words, phrases or even paragraphs, then select the station and database file you wish to analyze. You may easily import key text in order to start a query, as well as save or print the results of the search straight from DbOctopus. The application offers you several editing tools, designed automatic code completions, or creation or JOINs. Additionally, you can create standard scripts for any table, view or stored procedure and convert common tables to pivot view. Reliable SQL database explorer DbOctopus facilitates the access and analysis of database structure, as well as allows modifying dependencies, such as parent-child relations between data fields. Moreover, the software enables you to explore relations and easily join or bind tables. The process of modifying relational data is simple and does not require extensive knowledge of SQL code scripting. Key Features: Ability to connect to remote databases through an SQL server Create, modify and export SQL scripts for database tables, stored procedures, views, etc. Create/View Database tree Explore tables, data fields and tables in a tree or a table of contents View database structure in hierarchy format Allows connections through remote SQL server Backup and restore database tree structure Create, edit or view database tables and data fields Database work sheets Convert common tables to pivot views Pivot tables, PIVOT queries View and edit pivot fields Works with 2edc1e01e8
