This is an excerpt from our latest review: "Adobe's Lightroom was present at Photokina 2014 while Sony's camera app, which has long been subject to canned reviews by PR agencies, was not. Neither was Apple's iPhoto app or the Pixma printers and gal {previously known as PIXMA Pro 9000} that is accompanied by a Photoshop plugin." As we mentioned already, the team from Adobe announced a new feature at Adobe Max 2014 . One of the announcements that is important for photographers and photo editors is the Photomerge feature for PS CC 2018; it is included as part of the Experimental feature. The feature is available from both the Develop module by selecting the filter from the filter toolbar. Help on image conditioning has been added. Photoshop now allows users to detect and process complex patterns, up to 64k colours per channel, allowing the capability for colour correction and even dynamic sharpening.

We have put together a short Adobe Max 2014 Overview video with the highlights of the keynote and relevant info. <https://www.youtube.com/watch?v=5bLemJjUt74&feature=youtu.be> So, my first impressions can be summarized as:

- Just upgraded from CS6; I'm loving the new UI and workflow, but I am having a lot of trouble with the learning curve.
- Wow! The new text tools are amazing, they are faster and more responsive than the legacy tools. They are also accurate, even in that things that stick out (like skew).
- I really like the fact that you can use the paint tools independently of the main window. It's a great way to get back to 'less is more' design. I have done some work on this, and it's a great feature.
- The Smart improve tools are amazing! Highly recommended.
- I'm surprised how many people didn't mention the Content Aware Fill. If you use it a lot, it's a game changer.
- This is definitely going to be my workflow for the coming months.

LOS ANGELES--(BUSINESS WIRE)-- Today, Adobe (Nasdaq:ADBE) announced at Adobe MAX - the world's largest creativity conference - new innovations in Photoshop that make the world's most advanced image editing application even smarter, more collaborative and easier to use across surfaces. Share for Review (beta) enables users to conveniently collaborate on projects without leaving Photoshop, and new features make editing images in a browser far more powerful. Additionally, the flagship Photoshop desktop app adds breakthrough features powered by Adobe Sensei AI, including selection improvements that enhance the accuracy and quality of selections, and a one-click Delete and Fill tool to remove and replace objects in images with a single action. "Our customers demand more creative tools to help their teams complete their projects, and we've been listening and responding to those needs," said Brian Blau, senior vice president, Applications Ecosystem at Adobe. "With the announcement of these new features, we've laid a foundation for the next generation of image editing software that works across surfaces. We're opening up Photoshop to anyone with an Internet connection or device, so that more people everywhere can be creative together, knowing that anything can go." For amateurs who want to get creative with their photos, Adobe Photoshop Elements is still the best game in town. Professionals, of course, can do all this and more with the full Photoshop application, but that comes with a high learning curve and recurring price tag. Elements makes a lot of the coolest Photoshop effects accessible to non professionals. It offers a generous subset of the pro editor's features in a simpler package.
