Elements will read artistic files (CSN, Kodak Enfis, etc), but not all of them are compatible. As far as I know, Photoshop Elements has no way to convert files to a format acceptable to Elements. The LCNs are used as "location keys" to link an image to where it was developed, but any accuracy is only a matter of workflow and luck. You can't convert RAWs to DNGs in Elements, either. When I tried, it simply threw a red X in the window and said "This file is not supported." I don't mean to say that RAW conversion isn't possible; I just don't know how yet. It would have to be done on a machine with Photoshop CS5 or LR3, or in a virtual machine. Since I am also a fan of developer tools, I have been using the Adobe ID account login and ESRP. The ESRP password is the same as the user name password. If you exceed your limit of downloads, or begin using the trial version, Adobe alerts you that your subscription is about to expire. Adobe also generates temporary passwords (a use of Adobe Sensei) and sometimes the same password will be entered twice. Photoshops Pro now organizes a user's media based on the date the files were added, which is exactly the app's function. Elements has provided a way to command-click through a list of images, but it's far less handy. If you ever feel Compelled to use this feature, you can use the arrow keys on forward or backward to navigate. I will be glad to see my state ID replaced by a user ID at the OneDrive download location for various reasons, including that I will be more likely to keep it if some liability protection is offered. However, until the OS limits are raised, I won't be moving the OS and labor over to the OneDrive. A disk went bad, and I had to reinitialize and re-install the OS to retain my data. Of course, all of my software was boxed, so the only data lost was the one disk. I'm sure there is something I didn't back up that is important.
