The review progress is shown as a bar, with each color corresponding to a milestone. There are five different areas on the progress bar. The top-most indicator, an empty triangle icon, is for comments that haven't been added yet. The next largest area, consisting of three different color segments, shows comments that have been discussed. The comments can be either accepted or rejected. The bottom-most barrier shows comments that have been resolved and that can no longer be changed or deleted. If a comment is accepted or rejected, the triangle or bars are both filled with the appropriate color. The review presentation tool Strip can also be used. Adobe Image Ready will be renamed to Photoshop. Users will have access to the latest Adobe Image Ready features and a complete library of Photoshop features without the need to install a separate software package. Adobe is enabling more than 250 Photoshop features to be used in all major Mac apps, including Photoshop, Photoshop Sketch and Photoshop Mix, which further increases the ability of artists to quickly share and collaborate on creative projects across platforms. Selection improvements: Photoshop will offer new selection tools for creating masks, high-quality selections and smart selection support for all object types. The selection

tools include selection brushes, healing tools, marquee tools, lasso tools, and the new Patch tool for repairing and enhancing selections. Because a selection can represent geometry and non-geometry, the new tools work for both types of objects. Users can use new marquee tools and the selection brush to add control points to make fine-tuned selections. Users can also use the Patch tool to integrate in-air editing tools into a selection to instantly edit and enhance selections. Instantly add, remove or modify control points and content when needed, without having to move the original selection. Sensei AI enhancements: The new version of Photoshop includes Sensei AI by Google, an AI-powered developer platform that enables image editors to boost real-time creative collaboration to the next level. The new version of Photoshop will improve Sensei AI to offer more and better blended previews and provide additional features to apply and erase content in images. These capabilities will be available in the latest versions of Creative Cloud applications using the new version of Photoshop.
