Cracking Adobe Photoshop is a bit more involved, but it can be done. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

Smart collections: A feeling of frustration because I don't know why they are added twice to the raw processor and for some weird reason they are not real smart collections as it doesn't work with AF lenses. You can have an empty collection (empty because it is not associated with a lens profile) that collects images and preselected settings. If you then try to create a smart collection it will only work with the same empty collection but not with images that need a specific profile. Such a big inconvenience and it happens because it is a new feature and not all lens profile creators have implemented it yet. Ease of use: More features in a tab that is very easy to use. Especially the search features and the choice of collections combined with the smart collections. And the list of every collection I have on the left side is more or less self-explanatory (I can only use: sort manually, select automatically, or show on roll, I cannot use all the useful options like search and smart collections). Lightroom mobile: I have all the same problem with this one as previous versions. I wish they would have made it possible to install the mobile version on the desktop version. It would be the perfect example of a mobile application that should only be used on a mobile display. The important things get lost in this approach. I used Lightroom mobile for an example but the same is true for other applications like Fstoppers or Xrite. There are many functions you don't like so they try to reduce the number of bugs with the final version of Photoshop. In the past you had to use the Developer mode to look what happened before the final release. Now they have separated it out to make it easier and cleaner.
